(I) Nursery
(II) Vegetative
(III) Reproductive
(IV) Ripening

Corn CS:
(I) Establishment
(II) Vegetative
(III) Reproductive
(IV) Maturity

CCI Category:
Inadequate
Sufficient
Excess

Regional Summary

Farm areas in the region had an inadequate water supply for crops throughout the month. This could have a negative impact, especially on the prevailing Establishment stage of corn crops that need a significant amount of water for growth and development. While such conditions were favorable for rice crops in the Harvesting stage, it may hinder planting activities for the next cropping season if the dry conditions persist.

Despite the minimal rainfall this month, the region has remained in a wetter condition over the last three months (see SPEI3).
